

Professor_Bear_Image_Analysis_Base

March 14, 2017

1 Professor Bear :: Image Analysis :: Loading and Displaying Images in an Ipython notebook

1.1 Professor Bear github

Code for Professor Bear YouTube videos at <https://github.com/nikbearbrown>

1.2 Download Anaconda 4 for Python 2.7

Download Anaconda 4 for Python 2.7 version <https://www.continuum.io/downloads>

Anaconda 4.3.0 includes an easy installation of Python (2.7.13, 3.4.5, 3.5.2, and/or 3.6.0) and updates of over 100 pre-built and tested scientific and analytic Python packages. These packages include NumPy, Pandas, SciPy, Matplotlib, and Jupyter. Over 620 more packages are available.
<https://docs.continuum.io/anaconda/pkg-docs>

1.3 iPython

Go to the directory that has your iPython notebook

At the command line type

jupyter notebook notebookname

ipython notebook notebookname will also work

For example,

jupyter notebook Professor_Bear_Image_Analysis_Loading_Histograms.ipynb

```
In [4]: # Bring in python image analysis libraries
%matplotlib inline
import matplotlib.pyplot as plt
import matplotlib.image as mpimg
import numpy as np
from skimage import color
import skimage.filters as filters
from skimage.transform import hough_circle
from skimage.feature import peak_local_max
from skimage import feature
from skimage import morphology
from skimage.draw import circle_perimeter
from skimage import img_as_float, img_as_ubyte
```

```

from skimage import segmentation as seg
from skimage.morphology import watershed
from scipy import ndimage as nd
from scipy.ndimage import convolve
from skimage import feature
import glob # for bulk file import

# Set defaults
plt.rcParams['image.cmap'] = 'gray' # Display grayscale images in... grayscale
plt.rcParams['image.interpolation'] = 'none' # Use nearest-neighbour
plt.rcParams['figure.figsize'] = 10, 10

# Import test images
imgpaths = glob.glob("./img/*.jpg") + glob.glob("./img/*.png")
# imgpaths = glob.glob("img/*.jpg") + glob.glob("img/*.png") Windows
# Windows has different relative paths than Mac/Unix
imgset = [mpimg.imread(x) for x in imgpaths]

# Display thumbnails of the images to make sure they loaded
plt.figure()
for i,img in enumerate(imgset):
    plt.subplot(1, len(imgset), i+1)
    plt.imshow(img, cmap = 'gray')

```

In [5]: `for i,img in enumerate(imgset):
 plt.figure()
 plt.imshow(img)`

```
In [6]: for i,img in enumerate(imgset):
```

```

img_bw = img_as_float(color.rgb2grey(img))
plt.figure()
plt.subplot(1, 2, 1) # One row, two columns, image 1
plt.imshow(img)
plt.subplot(1, 2, 2) # One row, two columns, image 2
plt.imshow(img_bw)

```

3 Evaluation

Install Anaconda 4 for Python 2.7 and get this notebook to run with a set of your images.
