Professor_Bear_Image_Analysis_Hough

March 14, 2017

1 Professor Bear :: Image Analysis :: Hough transforms

1.1 Professor Bear github

Code for Professor Bear YouTube videos at https://github.com/nikbearbrown

1.2 Download Anaconda 4 for Python 2.7

Download Anaconda 4 for Python 2.7 version https://www.continuum.io/downloads Anaconda 4.3.0 includes an easy installation of Python (2.7.13, 3.4.5, 3.5.2, and/or 3.6.0) and updates of over 100 pre-built and tested scientific and analytic Python packages. These packages include NumPy, Pandas, SciPy, Matplotlib, and Jupyter. Over 620 more packages are available. https://docs.continuum.io/anaconda/pkg-docs

1.3 iPython

Go to the directory that has your iPython notebook
At the command line type
jupyter notebook notebookname
ipython notebook notebookname will also work
For example,
jupyter notebook Professor_Bear_Image_Analysis_Loading_Histograms.ipynb

```
from scipy import ndimage as nd
             from scipy.ndimage import convolve
             from skimage import feature
             import glob # for bulk file import
             # Set defaults
            plt.rcParams['image.cmap'] = 'gray' # Display grayscale images in... graysc
            plt.rcParams['image.interpolation'] = 'none' # Use nearest-neighbour
            plt.rcParams['figure.figsize'] = 10, 10
             # Import test images
             imgpaths = glob.glob("./img/*.jpg") + glob.glob("./img/*.png")
             # imgpaths = glob.glob("img/*.jpg") + glob.glob("img/*.png") Windows
             # Windows has different relative paths than Mac/Unix
             imgset = [mpimg.imread(x) for x in imgpaths]
             # Display thumbnails of the images to ensure loading
            plt.figure()
             for i,img in enumerate(imgset):
                           plt.subplot(1, len(imgset), i+1)
                           plt.imshow(img, cmap = 'gray')

                                                                                                                        02.040060800000
```

1.4 Hough transforms

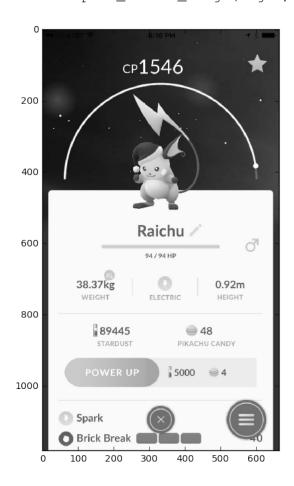

The Hough transform (https://en.wikipedia.org/wiki/Hough_transform) is a feature extraction technique used in image analysis, computer vision, and digital image processing. The purpose of the technique is to find imperfect instances of objects within a certain class of shapes by a voting procedure. This voting procedure is carried out in a parameter space, from which object candidates are obtained as local maxima in a so-called accumulator space that is explicitly constructed by the algorithm for computing the Hough transform.

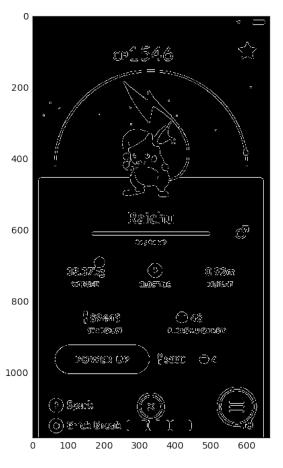

Take a look at How Hough Transform works https://youtu.be/4zHbI-fFIII for more detail on the idea behind the Hough transform.

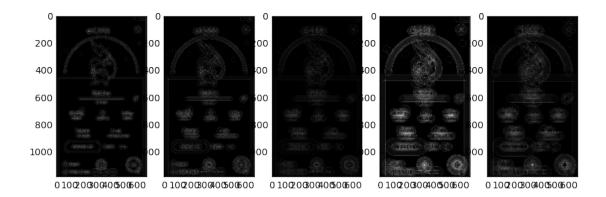

```
In [2]: # Plot the circular Hough transforms of an image at the given radii.
    def plot_circle_hough(img, radii, sigma):
        edges = feature.canny(img, sigma)
        hough = hough_circle(edges, radii)
```

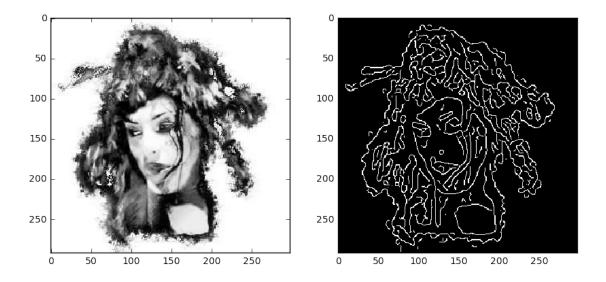

```
plt.figure()
plt.subplot(1, 2, 1)
plt.imshow(imgbw)
plt.subplot(1, 2, 2)
plt.imshow(edges)
plt.figure()
for j in range(len(hough)):
    plt.subplot(1, len(hough), j+1)
    plt.imshow(hough[j,:,:])
```

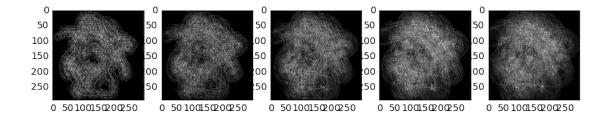

```
In [3]: # Apply to test images
    radii = np.arange(10, 35, 5)
    sigma = 2.0
    for i,img in enumerate(imgset):
        imgbw = img_as_float(color.rgb2grey(img)) # downsample to make it easied
        plot_circle_hough(imgbw, radii, sigma)
```
